SECURED ONLINE BACKUP SERVICE

Only a small percentage of computers have an easy way to make backups. Of those that do, many users do not make proper backups. The result is that thousands of individuals and small businesses lose hundreds of thousands of dollars worth of data annually to fire, theft, equipment failure, and many other common catastrophes. Even more lose data through everyday user error.

Of the few computer users who perform proper backups, an even smaller number store their backups offsite. Because of this, many businesses go broke when a fire strikes, destroying their computers and their on-site backups.

Studies show that it takes an entire day to reenter an hour's worth of lost computer data. Studies also show that businesses that lose a substantial amount of computer data will be out of business within two years.

DATA CLINIC offers a service that guarantees backups are done properly, regularly, and most importantly, stored OFFSITE.

SECURE BACKUP AND RESTORE SERVICES

We have SEVEN levels of encryption available to meet your data security needs.

We will design implement an onsite and remote backup restore solution that includes OFFSITE encrypted data for you that makes sense and is easy to use.

Call us today to schedule a free consultation.

As us about our premium "Disaster Recovery Program".
